The climate crisis impinges on children’s rights and wellbeing. Urgent action required.

Young children bear the disproportionate impacts of climate change and environmental degradation (CC&ED).

- **CC&ED impacts on all five components of the WHO Nurturing Care** (i.e. good health, adequate nutrition, responsive caregiving, opportunity for early learning, and safety and security, see right).

- **Children tend to be treated as a homogenous group, and the impacts of CC&ED in early childhood at distinctive stages of development is unclear.** This significant gap limits the capacity to anticipate and respond to the different needs of children within distinctive developmental windows, especially the first 1000 days. Early childhood development stages and the individual characteristics of children (e.g., gender, experience of a disability, etc.) are significant when considering the impacts of CC&ED on their development. There are no mechanisms to reflect these important distinctions in planning and responding.

- **Young children’s entire lives will be impacted.** The climate crisis will result in a plethora of lost opportunities for future generations. The planet will be a more dangerous place to live, young children’s ability to learn will be negatively impacted, and disasters will be more frequent, prioritising life and livelihood over education and fulfilment.

- **Young children are vulnerable, but ECD is a key building block in sustainable development.** By considering the impacts of CC&ED on today’s young children, there is the opportunity to not only improve their lives now, but also to secure a stronger future for a whole community. Building resilience through ECD is not merely a response to our most vulnerable citizens; it is also an act of empowerment and a pathway to achieving sustainable development.
